

1. N-12561 / N-12560 / N-12559:

Front-end technology: Expertise in front-end technologies, including JavaScript, CSS3 and HTML5 and third-party libraries such as ReactJS, Angular, jQuery and LESS

- Development languages: Knowledge of server-side programming languages including Java, Spring, API Design
- Database and cache: Familiarity with DBMS technology, including SQL Server, Oracle, MongoDB and MySQL and caching mechanisms such as Redis, Memcached and Varnish
- Basic design ability: Including knowledge of UI/UX and basic prototype design Cloud Fundamentals including docker, AWS, Azure, OCI
- Excellent writing and communication skills
- Ability to visualize a proposed system and be able to build it

1. N-12566

React JS, Typescript, jQuery/JavaScript, PowerShell, Knowledge on API's, SharePoint Online (Cloud) and Power Platform.

2. N-12589 / N-12590

Refer UI/UX mockups and do manual testing & create regression test suites to support Myuhc website & mobile applications. Work with engineering team & product team to identify testing scenarios, and find gaps in test coverage and enhance existing WDIO regression test suite. For new architecture CEX MyUHC website create regression test suite using Selenium / Playwright frameworks. We have offshore teams who are working in existing selenium framework, as federated model we need to work with them get the KT and build testing suite to support cost estimation functionality. Training needs : FSE Java with React JS + Automation with Selenium, Cucumber and BDD, API test automation

3. N-12538 (D)

This roles includes but not limited to support devops work on Chef team. This position would be playing a role in helping the application teams using the chef product in developing cookbooks using ruby DSL. Will be working on automations built around the chef ecosystem to support the adoption on large scale. Responsible for working on products build using Jenkins, stackstorm and Python API framework. Also would be included on the efforts to integrate the services to UI (reactJS). This also includes evaluating new tools, new techniques, strategies; Automation of common tasks; build of common utilities to drive organizational efficiency with a passion around technology & solutions and influence of thought and leadership on future capabilities and

opportunities to apply technology in new and innovative ways. Required kill:- Python
Programming ReactJS Docker CI/CD (Jenkins)

4. N-12523

Responsibilities: - Full Stack Development - Web Development - Utility Development - Software Maintenance - Technical Debt Reduction - Automation - Creating scalable and adaptable solutions to problems Technologies you can expect to see in some capacity: - Docker/Containerization -Cloud Utilities -Python -Bash, HTML, CSS, JavaScript, PHP, Go &/or Rust -Apache SOLR -S3 Bucket Storage

5. N-12510

Required Qualifications

- Bachelor's/Master's degree in CS, engineering, software engineering, or related field Strong analytical and problem-solving skills.
- Eager to learn DevOps methodologies and enabling Automation within development teams.
- Experience on Jenkins GitHub flow would be added advantage.
- Jenkins, groovy scripting, Linux shell scripting, python scripting, Java, Spring
- Front end development in React/Angular
- Experience or eager to learn Kubernetes/Azure cloud.
- Understanding of cloud concepts like server/network virtualization would be added advantage.
- Docker and Containers for deploying applications and Docker scripting would be added advantage.
- Exposure to code scanning tools Sonar, fortify Preferably or any other tool for source code quality would be added advantage.
- Pytests, Junits and generating coverage reports Good to have worked on coverage reports.
- Trouble shoot and resolve issues in our dev, test, and production environments.
- Up to date on the latest industry trends, able to articulate trends and potential clearly and confidently.
- Able to work independently with minimal direction.
- Excellent verbal and written communication skills Must

6. N-12495 / N - 12496

Tech stack of Angular 10 or above, Typescript, Java, Spring boot-microservices, Elastic Search, Kafka & any SQL/NoSQL

- Angular 10+ , CSS (Foundation or Bootstrap), JavaScript, and HTML, with an understanding of CSS preprocessors including Sass and LESS
- Web development skills including HTML5, CSS, Bootstrap, JavaScript frameworks like Angular and ReactJS
- Good understanding of Spring framework including, spring core, spring cloud, spring boot etc. as the cloud native strategy to design and development of the enterprise web

applications and microservices •Active adherence to engineering best practices including unit testing, CI/CD, automated testing, etc.

- Write JUNIT and front-end test cases and work with SonarQube, Fortify, White Hat
- Ensure team is building reusable components, frameworks and libraries which can be leveraged across department
- Ensure solution and delivery teams follows best practices and improve application performance
- Familiarity with common software architecture patterns
- Participate in testing process through test review and analysis and skilled in Agile development methodologies including unit testing and continuous integration
- High attention to detail and proven ability to manage multiple, competing priorities simultaneously
- Taking ownership and driving results
- Good communication skills. Good attitude and self-motivated
- Angular, using single page webapps, and component integration with APIs
- Source control systems such as GIT, Knowledge in various branching/merging methodologies and release procedures.

7. N-12357

Developer will be responsible for designing and developing the SympleNote and EasyCheck Products. Developer should learn and maintain devops system. Knowledge of C#.Net, WebAPI, Angular & React, Javascript.

8. N-12354

Deliver user stories on UI as well as back-end. Knowledge on Python, JavaScript preferably ReactJS. Experience in working in Flask framework.

N-12495 / Addul_Khan / addul_khan@optum.com

Position Description

As full stack software engineer, this position will participate, collaborate with other engineers and product owners to development and implementation in order to modernize our Behavioral Health Utilization Management process.

Responsibilities

TDP in Software Engineer will be able to utilize your skills in both front end and back end, leveraging current technology stack with Java Springboot, Angular/React and some Database

Position Description

We would like to have 2TDPs who can work with the team on the Specialty suite of applications on the emerging technologies.

Responsibilities

React, Java, SprintBoot, MySQL, MongoDB

Position Description

With Delta Force, you will be joining a TDP built team (All members of the team are current TDPers or recent TDP Alumni) focused on improving the customer experience of users of this application, facilitating process improvement to allow for our team to process decommissioned applications more efficiently and identifying opportunities to unlock new ways to meet the ever-increasing demand to decommission applications. This position will allow for the opportunity to develop data and software solutions with far reaching scope and scale. The Delta Force team develops solutions focused on longevity and strong maintainability with the goal of many of our solutions outliving us. During your time with the team, you can expect to be challenged to create/develop automated solutions, new and improved web experiences and creating utilities that allow for improved customer experience. In addition to projects above there will be the opportunity to support operational activities that our helping the company drive towards 400+ Million dollar savings via decommissioning software and infrastructure. The work we do is vitally important to the future of the company but Delta Force also takes great pride in our team culture centered around collaboration, problem solving and allowing individuals to bring their authentic selves to work while tackling interesting problems in the decommissioning space. Experience with the technical stack and/or opportunity areas are preferred (Willing to work with you and develop the skills otherwise) but a strong United Culture fit is a core requirement for this role. If you have an interest in solving complex problems while getting to be an engineer and technologist - Delta Force is the place for you.

Responsibilities

Responsibilities: - Full Stack Development - Web Development - Utility Development - Software Maintenance - Technical Debt Reduction - Automation - Creating scalable and adaptable solutions to problems Technologies you can expect to see in some capacity: -Docker/Containerization -Cloud Utilities -Python -Bash, HTML, CSS, JavaScript, PHP, Go &/or Rust -Apache SOLR -S3 Bucket Storage

Position Description

We need a team member to work on UHG intranet application. This application is built on Microsoft 365 (SharePoint) cloud and has integration to various systems. The candidate for this position will work on building components for SharePoint using React js and Typescript, Power Platform, SharePoint search and Integrations with other Systems using API's.

Responsibilities

React JS, Typescript, jQuery/JavaScript, PowerShell, Knowledge on API's, SharePoint Online (Cloud) and Power Platform.

Position Description

TDP graduates for Premium colleges (IIT, BITS, VIT etc) - preferably CS background

Responsibilities

UI/UX with React, Java springboot, Cloud, Data science Data Analyst Application Development for High scalability and performance Keen interest in Digital as part of innovation team Data science background
